

Patient: XXX

Age:

Gender: F

Unit in charge:

Physician in charge:

Clinical diagnosis (suspicion) Cancer of the left breast

Date of admission:

ICD O-3
Carcinoma, infiltrating lobular
8520/3
Site @ Breast NOS
C50.9
JW 10/15/13

Material:

1) Material: Left breast. Method of collection: total organ resection

Histopathological diagnosis:

Examination performed on:

Invasive lobular carcinoma of the left breast (NHG2, pT2). (8520/3 T-04030)*

* codes according to ICD-O-3 or SNOMED

Macroscopic description:

Left breast, sized 21.2 x 12.3 x 5.4 cm, removed without axillary tissues and with a skin flap of 18.2 x 8.3 cm. Weight: 436g. Tumour sized 4x2,2x1,6cm found on the boundary of upper quadrants, placed 2.8 cm from the upper boundary, 1.4cm from the base and 1.0cm from the skin.

Microscopic description:

Invasive ductal carcinoma (classical type) – NHG 2 (3+2+1: 0 mitoses/ 10 HPF – visual area: 0.55mm: 0.55mm). The nipple without pathological lesions. Glandular tissue showing parenchyma atrophy.
