

ICD-0-3

Carcinoma, ductal, NOS 8500/3

Pth Site: Breast, LIQ C50.3 1/19/11 lw

CQCF Site: breast, NOS C50.9

Diagnosis:

1. Poorly differentiated ductal breast carcinoma (maximum diameter 4.5 cm, malignancy grade III) with widespread tumor infiltration of the skin also with ulceration of the skin, along with invasion of the lymph vessels and infiltration of the neural sheaths. Remainder of glandular body fibrolipomatous and in advanced involution, also with cystic duct ectasia. No calcification. No evidence of DCIS.

At the site of the nodular formation already macroscopically documented in the region of the cranial resection line (skin) cutaneous/subcutaneous tumor infiltrates, also with invasion of the lymph vessels here. Other safety margins free of atypia.

Tumor classification: pT4b pN2 (at least, see conglomerate tumors), MX, R1 (see cranial resection line, axillary soft tissue!), G3 (L1, V0).
