Department of Cancer Pathology

copy No. 2

Date:

Examination: Intraoperative examination

Internal invoice No.

Cost of diagnostic procedure

Examination No.:

Patient: XXX

PESEL: XXX

Age:

Gender: F

Material: Multiple organ resection – right breast.

Unit in charge:

Physician in charge:

Material collected on

Material received on:

Expected time of examination: 20 minutes (from receipt of the material)

Clinical diagnosis: Suspected cancer of the right breast. Lesion on the boundary of the upper quadrants.

Examination performed or

Result of intraoperative examination:

Carcinoma probabilliter invasivum.

Final diagnosis after paraffin specimens are analysed.

UUID:0EAS7ABF-E3DA-4862-BAB8-A6E36408AC42

Compliance validated by:

Examination performed on:

Macroscopic description:

Surgical specimen sized 5 x 4 x 2 cm with a skin flap of 4 x 0.5 cm.

Minimum side margin 0.2 cm.

Result of intraoperative examination:

Carcinoma papillare probabilliter invasivum.

Foci DCIS typus cribrusos cum atypia gradus levioris ad mediocrum sine necrosis.

Final diagnosis after immunohistochemical tests.

Examination performed on:

Results of immunohistochemical examination:

Estrogen receptors found in over 75% of neoplastic cell nuclei.

Progesterone receptors found in over 75% of neoplastic cell nuclei.

HER2 protein stained with HercepTest™ by DAKO.

Negative reaction in invasive cancerous cells (Score = 0)

Examination No.

Patient: XXX

PESEL: XXX

Gender: F

Examination performed on:

Histopathological diagnosis:

Carcinoma papillare probabiliter invasivum NHG1 (2 + 2 +1/0 mitoses/ 10 HPF, visual area diameter: 0.55 m).

Corresponds to invasive papillary carcinoma of the right breast.

Solitary foci of DCIS (cribrate type with medium nuclear atypia, without necrosis).

The immunohistochemical test showed the absence of a myoepithelial cell stratum around the foci of the invasive lesion (p63-, SMA'). The cells show negative reaction with CK5/6. Cytokeratin 7 present in part of the cells.

Compliance validated by:

Examination performed on:

Supplementary test

Expression of the Ki67 proliferation antigen showed in 5% of cellular nuclei (20% in hot spots)
