Final Diagnosis

Breast, right, mastectomy: Infiltrating ductal carcinoma, Nottingham grade III (of III), forming a 2.5 x 2.5 x 2 cm mass. Ductal carcinoma in-situ is not identified (AJCC pT2). Surgical margins and nipple are negative for tumor.

Lymph nodes, right sentinel axillary (No. 1 and No. 2) and right axillary, excision: Multiple (3) right sentinel axillary lymph nodes and (2) right axillary lymph nodes are negative for tumor.

Breast, right, biopsy: Small fragment of skin and adipose tissue, negative for tumor.

Breast, left, mastectomy: Proliferative fibrocystic changes characterized by fibrosis, sclerosing adenosis and cyst formation. A single 0.5 cm fibroadenoma with myxoid degeneration is identified.

Immunohistochemical studies with antibodies against cytokeratin show the sentinel lymph nodes #1 and #2 to be negative for metastatic carcinoma. Immunohistochemical stains for estrogen and progesterone receptors are negative in neoplastic cells.

ICD-0-3

carcinoma, infiltrating duct, NOS 8500/3

Site: breast, NOS C50.9
