

Gross Description: There is a breast with tumor of irregular shape up to 3 cm in its largest dimension. At the distance of 1.5 cm from the 1st tumor node there is the 2nd node up to 1 cm in size. In the axillary fatty tissue there are lymph nodes with lipomatosis (suspicion of metastases).

Microscopic Description: Infiltrating lobular carcinoma of the breast, G-3, with multicentric type of growth. There are single signet-ring cells. Ten examined lymph nodes demonstrated metastases.

IHC-stainings: ER - positive reaction 98% 3+; PR - positive reaction 50% 3+; Her-2/neu - negative reaction 1+; Ki-67 - 6%.

Diagnosis Details: Tumor Features: Indeterminate, Tumor Extent: T2 tumor size more than 2cm not more than 5 cm, Venous Invasion: Not specified, Margins: Absent, Treatment Effect:

Comments: Original records read pT1N2M0. But tumor size is up to 3 cm in largest dimension, which corresponds to T2.

Formatted Path Reports: BREAST TISSUE CHECKLIST

Specimen type: Radical mastectomy

Specimen size: Not specified

Tumor site: Breast

Tumor size: 0 x 0 x 3 cm

Grossly evident lesion: Yes

Histologic type: Lobular carcinoma

Histologic grade: Poorly differentiated

Tumor extent: Not specified

Lymph nodes: 8/10 positive for metastasis (Axillary 8/10)

Extracapsular invasion of the lymph nodes: Not specified

Margins: Uninvolved

Nottingham Histologic Score

Tubule formation: Not specified

Nuclear pleomorphism: Not specified

ICD-0-3

carcinoma, infiltrating lobular, NOS
8520/3

Site: breast, NOS C50.9
