Histopathology Biopsy Small

Specimen:

Two blocks representing left breast tissue are received.

Clinical Note:

Carcinoma left breast.

Microscopic Features:

One of the block reveals breast tissue infiltrated by acellular neoplastic lesion composed of intermediate size tumor cells exhibiting moderate nuclear pleomorphism with eosinophilic cytoplasm. Mitotic figures are also identified. The surrounding stroma exhibits moderate chronic inflammation. Focal necrosis (< than 5%) is noted. The other block reveals benign breast tissue.

Conclusion:

Two blocks representing left breast tissue received for 2nd opinion :-

Infiltrating Lobular Carcinoma grade II (Tubule formation 2/3, Nuclear pleomorphism 2/3, Mitoses 2/3, Total = (6/9), according to Modified Bloom and Richardson's grading system.

Tumour nuclei constitute approximately 70% of the total nuclei.
