Diagnosis:

Well-differentiated invasive lobular carcinoma of the right breast measuring up to 3.3 cm with circumscribed infiltration into the dorsal resection margin in the main preparation and with tumor-free follow-up dorsal resection material (thus tumor-free dorsal margin of at least 1.2 cm). Minimum margin 0.5 cm at 3 o'clock and carcinoma-free follow-up resection material at 3 o'clock with moderate mammary fibrosis and focal intraductal hyperplasia without atypia. Further minimum cranial and caudal margins > 1.2 cm. No invasion of lymph vessels. Fifteen Fifteen right axillary lymph nodes free of metastases with pre-existing lymphatic hyperplasia and pre-existing slight scarring in isolated larger lymph nodes.

Tumor classification:

M-8500/3, G 1, pT 2, L 0, V 0, pN 0 (0/15), pMX, R 0. Stage II a.
