PROCEDURE

MODIFIED RADICAL MASTECTOMY RIGHT BREAST, INSERTION MEDIPORT

TISSUES

BREAST MASTECTOMY (WWO) NODES - RIGHT BREAST AND AXILLARY CONTENTS

FINAL DIAGNOSIS

RIGHT BREAST AND AXILLARY CONTENTS -

POORLY DIFFERENTIATED INFILTRATING DUCTAL CARCINOMA, SCARFF-BLOOM-RICHARDSON GRADE III/III. THE TUMOR MEASURES 10.5 CM. IN MAXIMUM DIMENSION.

LYMPHOVASCULAR INVASION IDENTIFIED INSIDE THE TUMOR.

ALL SURGICAL MARGINS ARE FREE OF THE LESION. THE CLOSEST SURGICAL MARGIN IS THE DEEP SURGICAL MARGIN WHICH IS 1.2 MM. FROM THE TUMOR (JUST ABOVE THE MUSCLE).

BENIGN SKIN AND NIPPLE.

TEN OF FOURTEEN LYMPH NODES ARE POSITIVE FOR METASTATIC CARCINOMA (10/14).

TUMOR STAGE: STAGE IIIC, T3, N3, MX.
PQRI CATEGORY II: 3260F

GROSS DESCRIPTION

The container is received fresh unfixed labeled "right breast and axillary contents" and consists of a 788 gm. apparent right breast which is 24 x 17 x 5 cm. in greatest overall dimension. The attached skin ellipse is 11.5 x 8.5 cm. There is an eccentrically attached nipple. There is also an

attached suture indicating superior lateral/upper outer aspect inked with an orange dye. The lower outer is inked green, the upper inner is inked black, the lower inner is inked red. The deep surgical margin is inked yellow. Sectioning reveals a dense gray-white slightly swirled tumor mass which is 10.5 x 5.5 x 4 cm. in greatest overall dimension and grossly appears to be 3 cm. from the superior lateral/upper outer, 3 cm. from the upper inner and appears to be 3.5 cm. from the lower outer and 4 cm. from the lower inner. It grossly appears to be 0.8 cm. from the deep surgical margin. The tumor mass has scattered yellow-tan chalky areas varying up to 0.2 cm. and hemorrhagic areas varying up to 0.1 cm. Sectioning through the axillary fat reveals tan-gray nodules varying up to 2.5 cm. in greatest dimension, each are bisected, one-half submitted. Twenty blocks.

Key Note Block Summary: 1—nipple, 2—deep surgical margin, 3—superior lateral/upper outer, 4—lower outer, 5—upper inner, 6—lower inner, 7 through 10—tumor, 11 through 13—random, 14 through 20—apparent nodes.

MICROSCOPIC EXAM

MICROSCOPIC EXAMINATION CONDUCTED BY PATHOLOGIST CONFIRMS FINAL DIAGNOSIS.
